

How do I add a custom domain to my Website Builder plan?

- 2021-11-17 - Διαχείριση domains

You can easily connect your Website Builder plan with a domain you have registered with Papaki or another registrar, by following the steps below.

Step 1. Log in your Control Panel at Papaki

[Log in your Control panel](#) at Papaki and go to your Website Builder plan. Then, click on "Edit" under the domain name.

The screenshot shows a control panel interface. On the left, there is a blue notification box that says "Image queued" and "Αναμονή εικόνας" with the Papaki logo. The main area displays details for a website plan:

- Plan Type:** Free ([Change](#))
- Domain:** .websitestool.com ([Edit](#))
- Your plan's nameservers are:**
 - Primary Name Server: dns1.papaki.gr
 - Secondary Name Server: dns2.papaki.gr
 - Primary NS IP Address: 78.46.65.247
 - Secondary NS IP Address: 78.47.81.153
- Plan Features:** 1 GB Disk Space, 1 website
- Welcome Email:** [Resend Email](#)
- Auto Renew:** Inactive

Step 2. Insert a domain name

Insert the domain you want to connect with your Website Builder plan and click save.

The screenshot shows a dialog box titled "Manage the domain of this Website Builder plan". It contains the following elements:

- A header bar with the title and a close button.
- A sub-header "Manage the domain of this Website Builder plan".
- A text input field containing ".websitestool.com".
- A message: "Select the domain you wish to connect with the Website Builder plan."
- A label "Domain: www." followed by an empty text input field. A red arrow points to this field.
- A small example text below the input: "(e.g. papaki.com)".
- A blue "SAVE" button.

To complete the process you need to create a CNAME record for your domain, through a DNS hosting service.

Depending on the case, you will see the option to complete the process automatically (image 1) by clicking on the green button "Connect Domain", or manually by creating on your own the DNS Records, via a DNS Hosting service.

[Follow the step by step instructions to do it manually.](#)

The screenshot shows the same dialog box as above, but with additional instructions for manual DNS record creation:

- A message: "To connect your domain lalala.gr with the Website Builder plan 207608024438.websitestool.com, you need to use a DNS service in order to insert the following records ([Follow the instructions](#))." followed by a vertical scrollbar.
- Record 1:
 - Type of Record: A
 - Domain name: [input field]
 - IP address: 138.201.157.158
- Record 2:
 - Type of Record: CNAME
 - Host Name/Alias: [input field]
 - Canonical name (Destination): websitestool.com
- A blue "CLOSE WINDOW" button at the bottom.
