

How do I create the CSR in my Plesk 12 Control Panel?

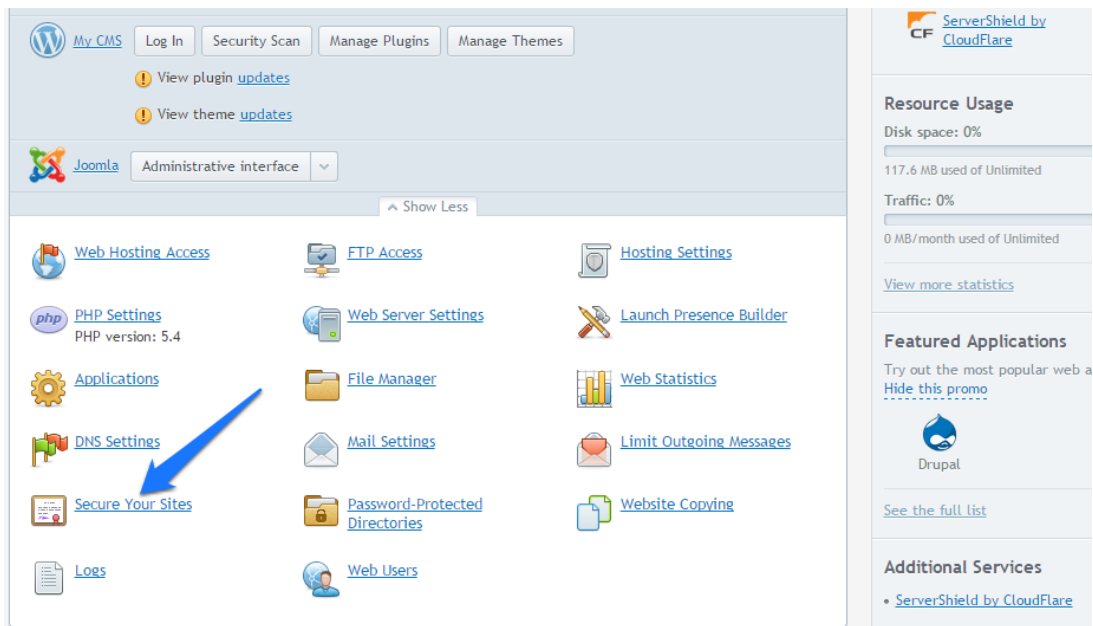

- 2021-07-10 - SSL Πιστοποιητικά

In order to create the CSR in your Plesk 12 Control Panel, follow the steps described below:

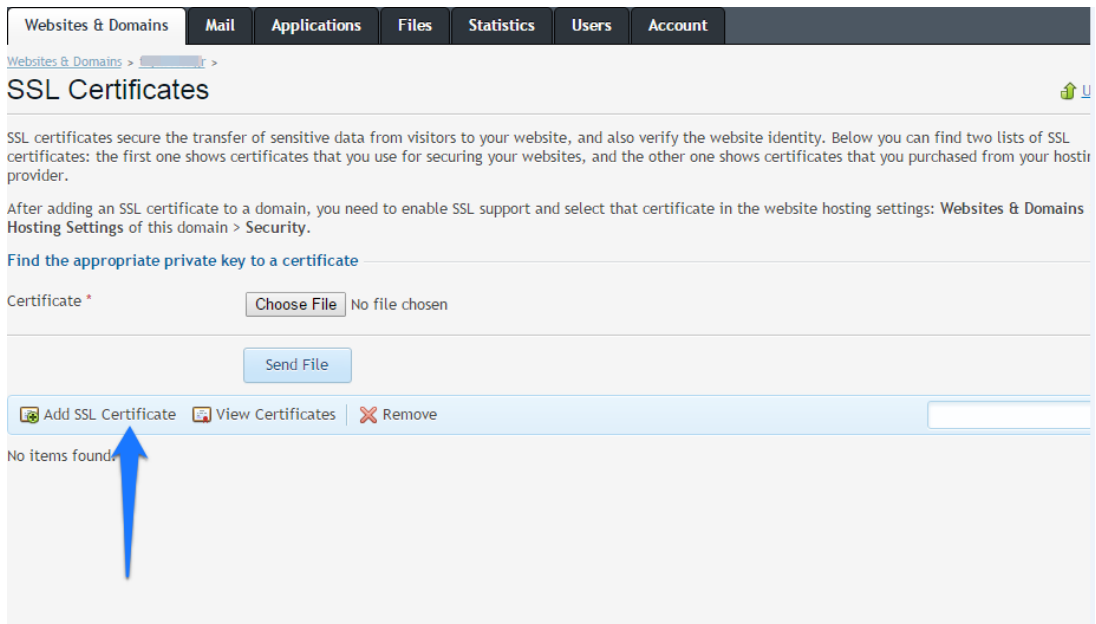

1) Login to Plesk.

2) Go to the tab "Websites & Domains". Find the option "Secure Your Sites" (click on Show more) for the domain you wish to install the SSL.

3) In the next page choose "Add SSL Certificate".

4) Next, you will have to fill in the settings of the SSL in latin characters, because if you use Greek, the Certificate Authority may cancel the application.

No1 Certificate name: It will help you recognize the specific certificate.

No2 Country: Enter your country

No3 State or Province: Fill in the state or province of the company 's headquarters. Use no

more than 64 characters.

No4 Location: Fill in your location. Use no more than 64 characters.

No5 Organization name (company): Fill in the company name for which the SSL is issued.

No6 Domain name: Fill in the domain name, for which you want to activate the SSL. i.e: your-domain.com.

ATTENTION! The domain www.your-domain.com is considered different from your-domain.com when activating a SSL certificate. Please pay attention to provide the right domain (with www or without), because after the activation you will not be able to change the domain name.

No7 E-mail: Fill in your email.

No8 Make sure that all the information that you enter is correct and accurate because they will be used for your private key. Click "Request", so that your CSR is created with your certificate request.

The screenshot shows the 'Add SSL Certificate' form with the following fields and annotations:

- 1**: Certificate name *
- 2**: Country * (United States)
- 3**: State or province *
- 4**: Location (city) *
- 5**: Organization name (company) *
- 6**: Domain name *
- 7**: Email *
- 8**: Request button

Additional form elements include: Bits (2048), Organization department or division name, and buttons for 'Buy SSL Certificate' and 'Self-Signed'. A blue arrow points to the 'Request' button.

5) Your SSL is added. To see the CSR, click on the name of the certificate.

[Websites & Domains](#) | [Mail](#) | [Applications](#) | [Files](#) | [Statistics](#) | [Users](#) | [Account](#)

[Websites & Domains](#) > [SSL Certificates](#)

Information: The SSL certificate was added. To make the certificate work, select it in the website hosting settings (on the Websites & Domains tab).

SSL certificates secure the transfer of sensitive data from visitors to your website, and also verify the website identity. Below you can find two lists of SSL certificates: the first one shows certificates that you use for securing your websites, and the other one shows certificates that you purchased from your hosting provider.

After adding an SSL certificate to a domain, you need to enable SSL support and select that certificate in the website hosting settings: [Websites & Domains Hosting Settings](#) of this domain > [Security](#).

[Find the appropriate private key to a certificate](#)

Certificate * No file chosen

1 items total Entries per page: [10](#) [25](#)

<input type="checkbox"/>	R	K	C	A	Name	Used
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		0

1 items total Entries per page: [10](#) [25](#)

6) In the new page find the CSR section and copy all the text that begins from -----BEGIN CERTIFICATE REQUEST----- and ends with -----END CERTIFICATE REQUEST-----

Your CSR should look like this:

```

CSR

-----BEGIN CERTIFICATE REQUEST-----
